

Mb-CONTROL

Myoglobin Latex Control
Latex-Turbidimetry

Quantitative determination of Myoglobin

IVD
Store at 2 – 8 °C

PRODUCT CHARACTERISTICS

The control is a liquid Mb solution from human origin used to evaluate the precision and the accuracy of Mb determinations in human serum by turbidimetric method.

REAGENTS

Mb CONTROL	Human Mb serum with a low concentration of Mb
------------	---

PRECAUTIONS

Components from human origin have been tested and found negative for the presence for HbsAg, HCV and antibody to HIV (1/2). However handle cautiously as potentially infectious.

PREPARATION

Ready to use

STORAGE AND STABILITY

This control is stable until the expiration date on the label when stored tightly closed at 2-8 °C and contamination is prevented during their use. Do not use reagents over the expiration date.

PROCEDURE

To be used in turidimetric assays.

COMPONENT	VALUE	RANGE	UNITS
Mb CONTROL			ng/mL

Ref: ACC16-032 Cont: 1x2 mL
Lot:
Expiry date:

VITAL DIAGNOSTICS S.r.l. via Balzella 41/G/4, 47100 Forlì, ITALY
Tel: +39 0543 721220 Fax: +39 0543 796001
